

ARECA TABLEWARE

Areca tableware is a stylish and planet friendly alternative to the commonly used plastic or styrofoam disposables. Since it is produced from fallen Areca palm leaves, their natural composition makes them completely biodegradable. These are not only natural & beautiful but also sturdy enough to hold food. . Apart from the unique look, they are better for us and for the environment. Paper plates deplete the Earth's natural resource of trees, and plastic plates can take hundreds of years to degrade! With Areca products, these used plates become a part of your garden compost.

BAGASSE TABLEWARE

Bagasse is the fibrous residue remaining after extracting juice sugarcane. It is used to make disposable meal trays and other dinnerware replacing materials like plastic or styrofoam which is regarded as hazardous to the environment.

Plates made of bagasse are a perfect solution for cafeteria, picnics, office supplies or home events where disposable food service products are needed. Our line of sugarcane plates and bowls are produced by utilising sugarcane fibre that is normally discarded or burned. We are helping the environment by taking the waste and turning it into something useful.
